TYPE	PRJ CODE	TITLE	Brief Description	ASSIG MATRICOLA 1	ASSIG MATRICOLA 2	DATA ASSIGN.	DATA FINAL DELIVERY	X	Possible Thesys 1	Possible Thesys 2	Possible Thesys 3	Possible Thesys 4	X
PROF. ASS.	SEC-PRJ-1_23	Federated File System Encoding at the Edge in Smart Cities MPU-based	The Edge devices present a FileSystem not accesible, but only after the boot process and entering the at-the Edge Federation, asking to the neighbours will be able to mount the secure partition. In Smart Cities scenarios the device asks to the federated poles how to decrypt it. Here MPU (Raspberry) devices are considered leveraging Docker Container-based System.										
PROF. ASS.	SEC-PRJ-1B_23	Federated File System Encoding at the Edge in Smart Cities MPU-based	The Edge devices present a FileSystem not accesible, but only after the boot process and entering the at-the Edge Federation, asking to the neighbours will be able to mount the secure partition. In Smart Cities scenarios the device asks to the federated poles how to decrypt it. Here MPU (Raspberry) devices are considered leveraging Docker Container-based System.	549621		14/01/2026							
PROF. ASS.	SEC-PRJ-2_23	Federated File System Encoding at the Edge in Smart Buildings MPU-based	The Edge devices present a FileSystem not accesible, but only after the boot process and entering the at-the Edge Federation, asking to the neighbours will be able to mount the secure partition. In Smart Cities scenarios the device asks to the federated Fiber-Optics Gateways in the Building how to decrypt it. Here MPU (Raspberry) devices are considered leveraging Docker Container-based System.										
PROF. ASS.	SEC-PRJ-3_23	Federated File System Encoding at the Edge in Smart Cities MCU-based, in TOIT language Based	The Edge devices present a FileSystem not accesible, but only after the boot process and entering the at-the Edge Federation, asking to the neighbours will be able to mount the secure partition. In Smart Cities scenarios the device asks to the federated poles how to decrypt it. Here MCU (ESP32) devices are considered leveraging Jaguar Container-based System.										
PROF. ASS.	SEC-PRJ-4_23	Federated File System Encoding at the Edge in Smart Buildings MCU-based in TOIT language Based	The Edge devices present a FileSystem not accesible, but only after the boot process and entering the at-the Edge Federation, asking to the neighbours will be able to mount the secure partition. n Smart Cities scenarios the device asks to the federated Fiber-Optics Gateways in the Building how to decrypt it. Here MCU (ESP32) devices are considered leveraging Jaguar Container-based System.										
PROF. ASS.	SEC-PRJ-5_23	Federated File System Encoding at the Edge in Enterprises with more Sites MCU-based in TOIT language Based	The Edge devices present a FileSystem not accesible, but only after the boot process and entering the at-the Edge Federation, asking to the neighbours will be able to mount the secure partition. In Enterprises scenarios the device asks to the federated devices in the VPNs Sites how to decrypt it. Here MCU (ESP32) devices are considered leveraging Jaguar Container-based System.										
PROF. ASS.	SEC-PRJ-6_23	Federated File System Encoding at the Edge in Enterprises with more Sites MPU-based	The Edge devices present a FileSystem not accesible, but only after the boot process and entering the at-the Edge Federation, asking to the neighbours will be able to mount the secure partition. In Enterprises scenarios the device asks to the federated devices in the VPNs Sites how to decrypt it. Here MPU (Raspberry) devices are considered leveraging Docker Container-based System.										
PROF. ASS.	SEC-PRJ-7_23	Social media and extra parameters for Advanced MFA adoptions and implementations. MPU-based	Social media may offer another way for implementing Out of Band Communications for exchanging OTPs for Advanced MFA adoptions. Here MPU (Raspberry) devices are considered leveraging Docker Container-based System	541409		11/01/2025							
PROF. ASS.	SEC-PRJ-8_23	Social media and extra parameters for Advanced MFA adoptions and implementations. MCU-based	Social media may offer another way for implementing Out of Band Communications for exchanging OTPs for Advanced MFA adoptions. Here MCU (ESP32) devices are considered leveraging Jaguar Container-based System.	539716		10/01/2025							
PROF. ASS.	SEC-PRJ-9_23	The X3DH Protocol in MCU devices in TOIT language Based	The X3DH Protocol is adopted when all parties are not online at the same moment. Many use-cases require this security capability. Implementing the protocol in MCU (ESP32) devices in TOIT Language	546525		17/01/2025							
PROF. ASS.	SEC-PRJ-10_23	The X3DH Protocol in MPU devices in GO language Based	The X3DH Protocol is adopted when all parties are not online at the same moment. Many use-cases require this security capability. Implementing the protocol in MPU (Raspberry) devices in TOIT Language	542373	551477	31-mar							
PROF. ASS.	SEC-PRJ-11_24	Secure Proximity Activations MPU-based	Entering a Location with a SmartPhone and/or a SmartCar, and/or a SmartByke may alert a Bluetooth/WiFi Device and automatically actuating gates, lights, alarms, etc. Leveraging simple MAC Addresses is not secure at all. A new advertisement system should be adopted. Here MPU (Raspberry) devices are considered leveraging Docker Container-based System.	546204	545312	07/05/2025							
PROF. ASS.	SEC-PRJ-12_25	Secure Proximity Activations MCU-based in TOIT language Based	Entering a Location with a SmartPhone and/or a SmartCar, and/or a SmartByke may alert a Bluetooth/WiFi Device and automatically actuating gates, lights, alarms, etc. Leveraging simple MAC Addresses is not secure at all. A new advertisement system should be adopted. Here MCU (ESP32) devices are considered leveraging Jaguar Container-based System.	548507									
PROF. ASS.	SEC-PRJ-7B_23	Social media and extra parameters for Advanced MFA adoptions and implementations. MPU-based	Social media may offer another way for implementing Out of Band Communications for exchanging OTPs for Advanced MFA adoptions. Here MPU (Raspberry) devices are considered leveraging Docker Container-based System	549928	550139	07/05/2025							
PROF. ASS.	SEC-PRJ-8B_23	Social media and extra parameters for Advanced MFA adoptions and implementations. MCU-based	Social media may offer another way for implementing Out of Band Communications for exchanging OTPs for Advanced MFA adoptions. Here MCU (ESP32) devices are considered leveraging Jaguar Container-based System.										
PROF. ASS.	SEC-PRJ-9B_23	The X3DH Protocol in MCU devices in TOIT language Based	The X3DH Protocol is adopted when all parties are not online at the same moment. Many use-cases require this security capabiliy. Implementing the protocol in MCU (ESP32) devices in TOIT Language										
PROF. ASS.	SEC-PRJ-7C_23	Social media and extra parameters for Advanced MFA adoptions and implementations. MPU-based	Social media may offer another way for implementing Out of Band Communications for exchanging OTPs for Advanced MFA adoptions. Here MPU (Raspberry) devices are considered leveraging Docker Container-based System	541927		07/05/2025							

PROF. ASS.	SEC-PRJ-7D_23	Social media and extra parameters for Advanced MFA adoptions and implementations. MPU-based	Social media may offer another way for implementing Out of Band Communications for exchanging OTPs for Advanced MFA adoptions. Here MPU (Raspberry) devices are considered leveraging Docker Container-based System	551732								
PROF. ASS.	SEC-PRJ-7D_23	Social media and extra parameters for Advanced MFA adoptions and implementations. MPU-based	Social media may offer another way for implementing Out of Band Communications for exchanging OTPs for Advanced MFA adoptions. Here MPU (Raspberry) devices are considered leveraging Docker Container-based System	536119		17/06/2025						
PROF. ASS.	SEC-PRJ-7E_25	Fake Data Prevention with Conventional Cryptotools	Preventing fake data with conventional cryptography tools such as digital signatures, certificates, encryption and JWt									
PROF. ASS.	SEC-PRJ-7F_25	Triple Factor Authentication for Social Media	Triple Factor Authentication for Social Media introduces new concepts of OTP and cryptotools and JWT.									
PROF. ASS.	SEC-PRJ-7G_25	Federated File System Encoding at the Edge in Smart Buildings MPU based	Federated File System Encoding at the Edge in Smart Buildings MPU based: UC Smart Metering									
PROF. ASS.	SEC-PRJ-7H_25	Federated File System Encoding at the Edge in Smart Buildings MCU/FPGA based	Federated File System Encoding at the Edge in Smart Buildings MCU/FPGA based: : UC Smart Metering									
PROF. ASS.	SEC-PRJ-12A_25	Secure Storage in Edge-Cloud MPU-based	Secure Storage in Edge-Cloud MPU-based
